Improving the Level of Healthcare, Patient Safety, Quality and Efficiency

The quality of medical services and the profitability of hospital operation are two fundamental objectives which shall never be mutually contradictory, especially at times when budgets are tight.

Focusing on the patient, it is essential that the entire hospital staff is not only extremely well trained; the Hospital must also have a perfect process oriented architecture, medical equipment, information technology, building technology and infection control management.

This brochure highlights some of innovative Hospital's unique services.

Who We Are

***innovative Hospital** is a network of German enterprises, hospitals as well as teaching and training facilities. With more than 5000 specialized employees located all over the world, the members represent various subsections needed to counsel, design, realize and certify hospitals. Additionally, the network is able to teach and train the hospital staff.*

Some of the members are companies with global expertise; others are highly specialized small and medium enterprises (SME).

*The network partners of **innovative Hospital** have already teamed up to plan and build the „Experimental-OR“ in Tübingen, Germany. In doing so, they have recognized how important and supportive it is to coordinate individual products and services, not just to accelerate planning and building time, but also to operate the hospital more safely and efficiently.*

*They have joined forces within **innovative Hospital** to test and coordinate their products and services more effectively in the laboratory of the collective „Experimental-OR“.*

innovative Hospital

the Healthcare Cluster is supported by the State of Baden-Württemberg.

The „Experimental-OR“ is also used as training centre for various courses for the nursing and OR staff as well as for engineers and physicians.

Research & Development within the „Experimental-OR“

The "Experimental-OR" in Tübingen is more than an operating theatre showroom. "Experimental-OR" is a worldwide unique laboratory where new products are developed or tested with the intuitively operable equipment being integrated in an hygienic proper system hospital.

What We Do

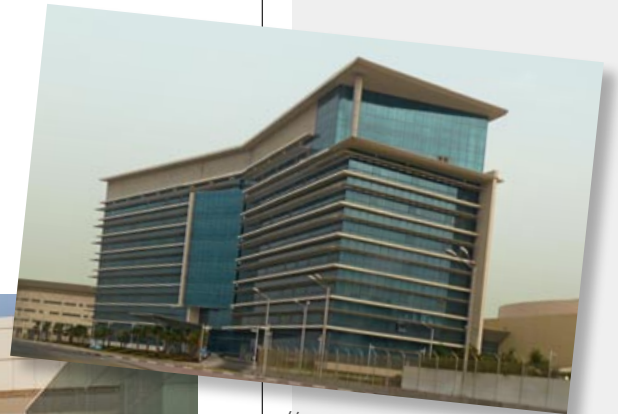

innovative Hospital offers to its customers comprehensive, innovative services for every aspect of hospital operation. We bring together experts from the fields of medicine, architecture, hygiene, medical and building services engineering.

innovative Hospital The customer will only have one single innovative Hospital consultant for the whole process. The advantage is that the complete process with all its intricacies will stay in one hand – everything needed is organized by this consultant.

For an improved level of healthcare, patient safety, quality and efficiency

innovative Hospital offers the complete package including turn key solutions of integrated and customized

- consulting
- planning
- realization
- certification
- staff qualification
- continuous partnership and support for the realized hospital

Definition of Requirements

Your healthcare system or your hospital has to be competitive on the Market – nationally and internationally. Outstanding architecture and the latest medical equipment alone is not enough.

*Defining the requirements of your individual hospital or healthcare system is the priority of the highly experienced consultants of **innovative Hospital**. Because today's design has to fulfil the requirements for the next 20 years and beyond!*

Value Planning

*The specialty of **innovative Hospital** is to plan the complete hospital from the inside to the outside - from detailed work ow to the outside façade.*

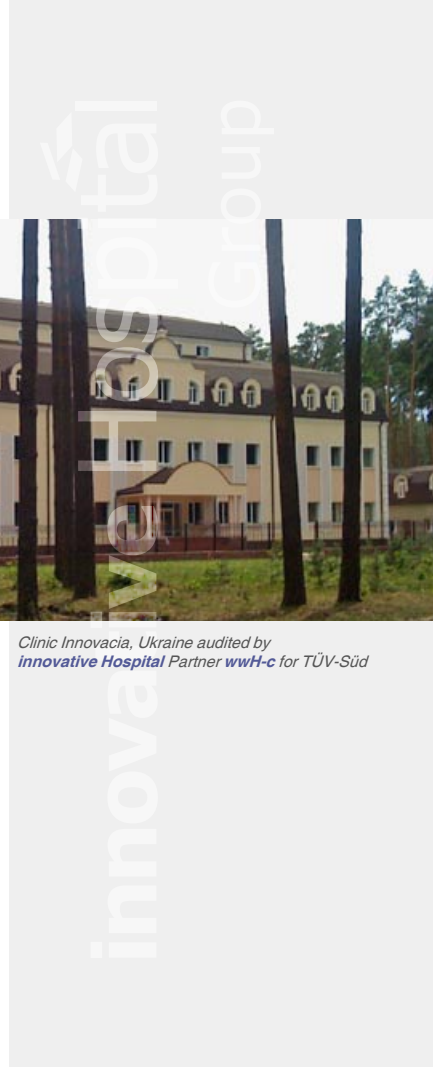

*The interdisciplinary team of **innovative Hospital** is based on original experiences gathered during many years as physicians, nursing and engineering works in various hospitals. **innovative Hospital** focuses very closely on the needs for both patients and hospital staff.*

The experiences of leading enterprises in the design and construction of your hospital ensure low live-cycle costs, e.g. in energy consumption and maintenance.

Hospital Al Wakrah, Qatar realized

Best Hospital Practice

Members of **innovative Hospital** are involved in important German and International standardisation committees. This guarantees our customers today the knowledge of future standards.

Furthermore, we develop own guidelines and solutions for planning, realization, auditing and operation of hospitals, the „Best Hospital Practice“, to improve efficiency and safety.

The result of all this effort is an efficient patient-oriented customized system of processes, architecture and technology.

Personnel Qualification

Worldwide, there is a noticeable lack of well-educated and well-trained hospital staff as

- physicians
- nursing staff
- engineers
- technicians
- administration personnel

innovative Hospital teaches and trains all levels of hospital personnel.

- nursing staff
- OR personnel
- specialist physicians.

Some courses can also be conducted as a “train the trainer” concept. This means that we cooperate with your hospital and coordinate further and advanced training of your staff.

The training course program of **innovative Hospital** is constantly expanded.

If individual training needs are not covered by the training courses **innovative Hospital** will find a suitable training solution with one of its German vendors.
